#### Chapter 4: The Rural Water Supply and Sanitation (RWSS) Programme

#### A. Subsector Issues and NWSSIP I

NWSSIP I was based on the fact that rural water supply and sanitation are vital to rural people, with significant effects on health, education and gender, and with a consequent large role in poverty reduction. Before NWSSIP I, implementation by the public sector had been inefficient, and external financing was largely channeled through projects. Implementation by communities had been much more successful. Overall, resources allocated and implementation capacity in the rural water sector were well below those of the urban water sector.

With this background, NWSSIP I targeted an ambitious objective of rapid expansion in services in rural areas. Targeting "half the MDGs", the programme aimed at providing services to more than 5 million inhabitants by 2015 and at improving sustainability of implemented schemes.

In pursuit of the set objectives, NWSSIP I adopted four policies: (1) decentralized implementation mechanisms; (2) enhancement of beneficiary community role; (3) adopting a demand responsive approach (DRA) to identify targeted communities and making this approach the standard practice; and (4) targeting and cost effectiveness by identifying means to implement projects that meet the needs at lower cost.

The NWSSIP I action plan provided for nine actions grouped under four strategic heads:

<u>Increasing coverage and implementation capacity</u> through: setting up sector strategy and coordination of activities; improving project/scheme implementation; and broadening the range of partners

<u>Improving technology choice</u> by: broadening available technology choices; and integrating sanitation and hygiene in rural water schemes

Sourcing the water by: ensuring and protecting water resources and their quality

<u>Improving targeting and sustainability</u> by: adopting bottom-up approaches throughout and mainstreaming gender issues; promoting sustainability through broadening the range of partners so as to include, for instance, more NGOs and community institutions; and directing available finance to the greatest need (targeting).

During the implementation of NWSSIP I considerable gains have been registered. According to JAR III, safe water coverage increased from 25% of the rural population in the base year (2002-2003) to 44% by the end of 2007. Sector agencies brought safe water to 3.3 million new beneficiaries through nearly 1,300 new schemes during the five year period 2003-7, with GARWSP accounting for 58%, PWP for 17% and SFD and RWSSP for 10% each. In 2007 alone, the subsector agencies reported that they had delivered coverage in safe water to a further two thirds of a million beneficiaries (see table 4.1).

Table 4.1: Numbers of schemes and of beneficiaries by agency and by year 2003-7 (beneficiaries in 000s)

|           | 2     | 003           | 20   | 004           |      | 05            | 20   | 06            | 20   | 07            | 2003           | 3-7 |

| Triangle  |       |               | •    |               |      |               | 4    | 12            |      |               | 12             | -   |
| Total     | 251   | 762           | 219  | 659           | 252  | 502           | 304  | 714           | 265  | 670           | 3,307          | 100 |
| Coverage  | 3     | 1%            | 35   | 5%            | 38   | 3%            | 41   | .%            | 44   | l%            |                |     |

Sanitation coverage also increased, but by considerably less, from 20% to 21% over the same period. The performance of GARWSP has improved, and public and NGO agencies are working together, in general satisfactorily. Decentralization, the demand responsive approach and user responsibility have all been implemented with some success. GARWSP is launching an appraisal study on the future role of its head office in the framework of decentralization of most functions to the branches. JAR III recorded important investments in capacity building, including a staff incentives scheme in place at GARWSP and significant investment in training across the sub-sector.

There are however a number of continuing concerns. Despite many years of effort, the rural water sector still lacks the clear agreed strategy that is, for example, enjoyed by the urban water sector. GARWSP and the agencies working in the rural water sub sector (PWP, SFD, RWSSP) are increasingly cooperating but are still developing procedures for joint programming and for alignment of their approaches. The tubewell still predominates as the water source, despite the dim outlook for groundwater. The depletion of water resources increases costs and threatens the sustainability of schemes. Some implementation problems persist. There is a lack of good information, and monitoring and evaluation systems need to be completed.

A constraint in rural water has been the lower than expected allocation of financial resources to the sub-sector. Financing allocated by government and donors averaged only 58% of the NWSSIP I targets, and actual spending has averaged barely half of the

originally planned levels (see Table 4.2). However, two positive factors have emerged. First, absorptive capacity has been going up – sub-sector disbursements have risen from \$31 million in 2005 to \$50 million in 2007. Second, implementation efficiency has been quite high, with sector agencies able to disburse 90% or more of the approved budgets.

Table 4.2: Budgets and disbursements 2005-7 (\$ millions)

|         | NWSSIP I | Approved | % of     | Disbursed | % of     |

Source: JAR III

The NWSSIP Update has therefore introduced some key changes and improvements that are expected to get the programme fully on track and up to speed. These changes and improvements are discussed in Sections B and C below. The changes and improvements will be introduced progressively over several years (see the Action Plan summarized in Section C below) but some will be started as early as 2008. For example, JAR III recorded preparations for a joint field inventory of rural water schemes, agreement on a common definition of coverage, and launch of an "interventions map" to allow joint planning by agencies.

#### **B.** The NWSSIP Update

#### **Programme overview**

The objectives set in the NWSSIP Update are broadly similar to those of NWSSIP I, slightly reordered and strengthened. The goal is to provide safe, sustainable, affordable and equitable water along with appropriate sanitation. Three objectives are targeted: (1) to increase access for the entire rural population; (2) to keep services sustainable and affordable; (3) and to ensure that agencies operating in the sub-sector deliver efficient, least cost projects on a demand-driven basis. The attached Results Chain shows how the outputs and outcomes of the Update contribute to these objectives.

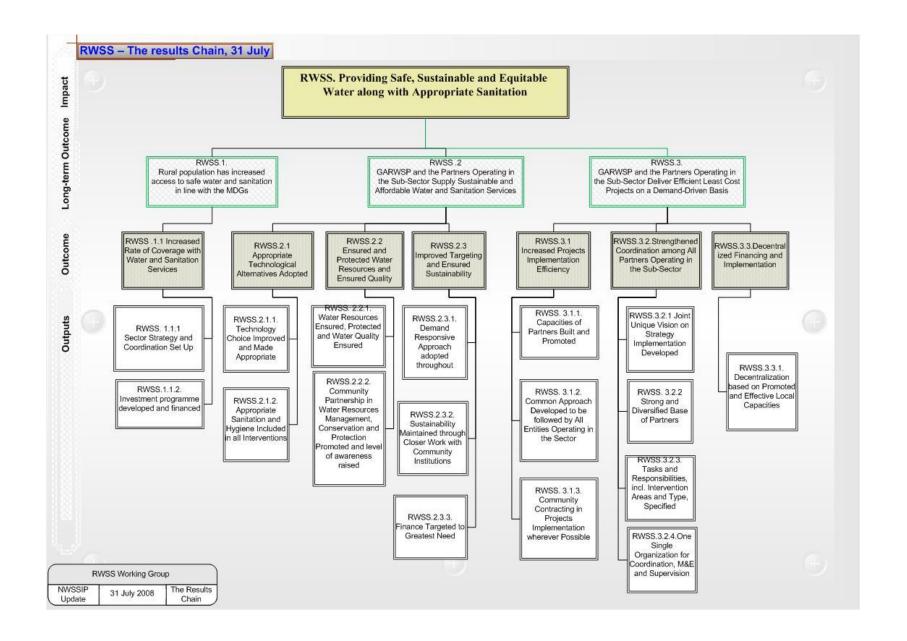

In summary, the <u>main themes and changes of the Update</u> are as follows:

- There is a clear and appropriate investment programme. The large investment in accompanying measures such as decentralization, partnership approaches and interagency coordination is expected to increase absorptive capacity and the efficiency and sustainability of outcomes.
- All agencies operating in the subsector will be aligned on the NWSSIP
   Update strategy with harmonized programming mechanisms and

implementation procedures. Joint approaches will be aided by the preparation of the interventions map and a common implementation manual, by joint planning and selection of appropriate technology, and by strengthened coordination led by GARWSP.

- The water resource constraint is factored in, and there is a move to work more closely with communities and with NWRA on this.
- Participatory approaches are to be institutionalized, including the Demand Responsive Approach, water users committees and societies, and community contracting.
- Sanitation and hygiene education will be systematically factored in to projects.
- NGOs will be encouraged to participate in service provision.

It is expected that these changes will allow GARWSP and the other agencies operating in the sub-sector to increase their effectiveness in delivering expanded, sustainable rural water and sanitation services.

#### The investment programme

A large investment (Table 4.3) over the eight years 2008-2015 of \$828.8 million by GARWSP and the other public agencies operating in the sub-sector is expected to bring safe water to an additional 6.4 million rural people, and ensure that appropriate safe sanitation facilities accompany each water supply investment.<sup>1</sup>

Table 4.3: Public sector investment in rural water and sanitation 2008-2015 (\$ 000s)

|   | 200   | 8-2010    | 201   | 11-2015   | Total | 2008-2015 |

Source: EAYRB

GARWSP, which covered an additional 318,000 beneficiaries in 2007, will remain the largest investor in the sub-sector, spending between \$60 million and \$80 million a year and bringing an annual increment of coverage of 450-600,000 people served by mechanized systems. Over the period 2008-2015, GARWSP is projecting to cover an additional 4.2 million people, about 65% of the additional population to be served 2008-2015, for a total expenditure of \$552 million.

The Public Works Project (PWP), which covered an additional 133,000 beneficiaries in 2007, will continue to spend about \$12 million a year to cover an annual increment of 92,000 people. Over the plan period PWP is expecting to cover an additional 735,000 people (11% of the total) through mechanized systems for a total cost of \$96 million.

RWSSP, which covered an additional 116,000 beneficiaries in 2007, is expected to phase out its operations in 2011. It will invest about \$30 million in 2008-2011 to cover an extra 201,000 people (3% of the total) through mechanized systems.

The Social Fund for Development will continue to specialize in potable water schemes based on water harvesting. In 2007, SFD covered an additional 97,000 beneficiaries. SFD investment is expected to increase, with SFD serving an annual incremental

<sup>&</sup>lt;sup>1</sup> The Update proposes that 10% of the investment cost of water projects should be allocated to sanitation. The population covered by safe sanitation will thus increase rapidly.

<sup>&</sup>lt;sup>2</sup> RWSSP is expected to phase out its operations in 2011

population of about 162,000 people for an average annual investment of \$15 million. Over the period 2008-2015, it is expected that about 1.3 million extra people (21% of the total) will be served, for a total investment of \$11.9 million.

Per capita investment costs have been calculated by dividing the investment costs for projects by the population to be covered. On this basis, costs for mechanical systems are in the range of about \$125 per person connected. The per capita cost for the SFD water harvesting schemes is about \$85 per person.

In addition, SFD will continue to implement the community-led "Total Sanitation" approach, covering about \$1,000 people annually with local sanitation for an annual investment of about \$300,000. Over the period 2008-2015, it is expected that about 650,000 extra rural people will be served. Total SFD investment in rural sanitation will be about \$11.9 million.

The programme also considers the role of NGOs and CBOs in service provision. These organizations will be brought within the coordination mechanism for sub-sector agencies, and are expected to provide community mobilization and training services (see Output 3.2.2 below). It is also possible that existing CBOs and qualified NGOs could benefit from output-based aid under the proposed Sector Wide Approach (SWAp).

#### **Coverage targets**

Table 4.4: Rural population covered by water supply and sanitation

| Table 4.4: Kurai pop | Table 4.4: Kurai population covered by water supply and samtation |                  |              |       |            |     |  |  |
|----------------------|---|------------------|--------------|-------|------------|-----|--|--|
|                      |   |                  | Water supply |       | Sanitation |     |  |  |
|                      |   | Rural population | Coverage     | %     | Coverage   | %   |  |  |
| Base year            | 2002  | 13.80 mn         | 3.40 mn      | 25%   | 2.80 mn    | 20% |  |  |
| Actual               | 2007  | 14.96 mn         | 6.80 mn      | 45%   | 3.14 mn    | 21% |  |  |
| NWSSIP Update        | 2015  | 19.50 mn         | 14.0 mn      | > 72% | -          | -   |  |  |
| Target               |   |                  |              |       |            |     |  |  |

NWSSIP I had set ambitious targets: an extra 3.5 million people served with safe water 2004-9, and a further 5.4 million people served 2010-2015. In practice, implementation appears to have been ahead of even these ambitious targets, with a further 3.4 million rural people covered 2004-2007, raising coverage from 25% in 2002/3 to 44% in 2007. It appears that the NWSSIP I 2009 target of 47% coverage could thus be readily achieved. The NWSSIP Update therefore proposes more ambitious targets of 60% coverage by 2010, and 72-85% coverage by 2015.<sup>3</sup>

By contrast with water supply, progress on sanitation against NWSSIP I targets has been disappointing. The target for 2004-9 was to bring sanitation services to an extra 3.7 million rural people, and to attain 37% coverage. Actual achievement in 2007 was below target, with coverage at the end of 2007 of only 21%. The NWSSIP Update investment

<sup>&</sup>lt;sup>3</sup> In order to ensure that reliable empirical data are established and to provide for accurate tracking over time, sub-sector partners have agreed to carry out a field inventory, to be initiated in late 2008 (see 2.3.3 in Part C below). This inventory will effectively establish a new and reliable baseline for planning and monitoring under the NWSSIP Update.

programme provides for an average 10% of every project value to be allocated to sanitation investment, along with the appropriate health and hygiene education, so that sanitation investments can be made that are appropriate to each community situation and expressed need.

The NWSSIP Update process also allowed partners in the subsector to agree on a definition of "coverage" (see box).

#### The agreed definitions of water supply and sanitation coverage

- Water supply coverage: the availability of 30 litres per capita per day of safe water within a fetching time not exceeding 30 minutes round trip
- Sanitation coverage: the availability of adequate means of human waste disposal without causing threats to public health or the environment

As for urban water, achievement of these ambitious targets depends upon the availability of financing and on the implementation capacity of GARWSP and other agencies operating in the sub-sector. It is expected that the introduction of the SWAp approach based on the NWSSIP Update will increase the finance available. The considerable investment in capacity building and the completion of the GARWSP decentralization process should increase implementation capability. Nonetheless, the targets remain indicative. Lower levels of financing, or slower than expected improvements in implementation capacity, will result in slower extension of coverage.

In view of the uncertainties about financing levels and the pace of implementation, the proposed investment program and related targets will be reviewed and adjusted after three years in a "mid-term review", the results being presented at the JAR 2011.

#### Policy implementation and institutional development

Total investment in policy implementation and institutional development (Table 4.5) is expected to be a very sizable \$19.6 million 2008-2015. This high level of investment in institution building is well justified by the need to achieve further efficiency gains in order to deliver the massive improvements in sustainable coverage which are being targeted.

About one third of the proposed investment (\$6.5 million, 3.3) will be devoted to the completion of the GARWSP decentralization programme, which is expected to be completed by 2010-2011. GARWSP branches will be equipped and staffed to function as fully empowered decentralized agencies working with local government and communities on a demand driven basis and with authority to allocate, commit and expend the resources allocated to them.

Significant investments (\$3.8 million, 2.2) will also be made in ensuring sustainability of water resources, largely through collaboration with NWRA and communities on sustainable management plans.

Other major institutional investments will be in adopting improved common approaches to implementation (\$3.1 million, 3.1) and in enlarging the technology choice and ensuring that sanitation is systematically factored in (\$2.3 million, 2.3).

Investment will also be made in improving poverty targeting and community self-management (\$1.4 million, 2.3), and in institutionalizing coordination (\$0.4 million, 3.2).

The NWSSIP Update outcomes, outputs and costs are summarized in Table 4.6 and discussed in more detail in Section C below.

#### Actions that will need to be jointly planned and implemented

For rural water supply, the principal program areas that need to be jointly planned and implemented are<sup>4</sup>:

Table 4.5: Inter-agency approaches for rural water and sanitation (lead agency in bold)

|               | Physical investment     | people get water supply  |         |                      |         |
|               | programme               | All water supply schemes |         |                      |         |
|               | implemented             | have provision for       |         |                      |         |
|               |                         | appropriate sanitation   |         |                      |         |

In order to achieve the outcome of increased coverage, the action plan provides for adoption of the NWSSIP Update as the *sector strategy* and for a well-articulated and enlarged *investment programme*.

Following several years of increasing coordination between agencies in the sub-sector, the NWSSIP Update process brought together all key stakeholders and facilitated agreement on a unified strategy, with harmonized programming mechanisms and implementation procedures. The action plan reflects this agreement, and the NWSSIP Update, once approved, will become the shared strategy, guiding all agencies.

Outcome 2.1 Appropriate technologies

|   |  |  | Costs (\$ '000s) |         |         |
|---|--|--|------------------|---------|---------|
| Outcome                                   | Key outputs  | Leading indicators                             | 2008-10          | 2011-15 | 2008-15 |
| 2.1 Selection of appropriate technologies | Technology choice improved (2.1.1)                           | Decrease of per capita cost                    | 2,000            | 1,427   | 3.427   |
|   | Sanitation and hygiene included in all interventions (2.1.2) | Number of projects with appropriate sanitation |                  |         |         |

Current rural water programs offer a limited choice of technologies (the most common choice being mechanical systems). In some areas this may not be the most appropriate or cost effective solution, for example where groundwater resources are inadequate or not sustainable. SFD, PWP and other agencies operating in the sub-sector are already specializing in water harvesting-based supply, and under the NWSSIP Update a planning process will be undertaken at the district level to agree between GARWSP and the agencies operating in the sub-sector on the *most appropriate technology* for each

proposed site and then to assign the project to whichever agency has the most appropriate technology to offer (2.1.1).

In addition, comprehensive manuals on technological options appropriate for rural water and sanitation will be developed, and research and development will be conducted to develop a wider range of technology choices (e.g. the "Total Sanitation" approach, low-cost drinking water treatment means such as silver-coated clay pots etc.). The private sector would be encouraged to participate in production and distribution of these and other low cost drinking water mechanisms.

The NWSSIP Update provides for *sanitation and hygiene* appropriate to local needs and situations to be systematically factored in to all water projects (2.1.2), and for 10% of every project value to be assigned to appropriate on-site or communal sanitation. In addition, hygiene education will be adopted for all projects. The experience of SFD in community-led "Total Sanitation" will be scaled up in coordination between GARWSP and other partners. A budget of \$1.2 million has been allocated to produce booklets and posters, to train staff, and to work through community mechanisms, mass media and education.

Outcome 2.2 Sustainable quality water sources

|                                       |  |   | Costs (\$ '000s) |         |         |
|---------------------------------------|--|---|------------------|---------|---------|
| Outcome                               | Key outputs  | Leading indicators  | 2008-10          | 2011-15 | 2008-15 |
| 2.2 Sustainable quality water sources | Water quality and quantity protected (2.2.1)                         | All rural water supply wells are NWRA licensed            | 1,642            | 2,091   | 3,733   |
|                                       | Community<br>partnership in water<br>resources<br>management (2.2.2) | Number of water user committees and societies operational |                  |         |         |

As Yemen's water resources are fully developed, rural water projects are increasingly encountering problems of obtaining a viable water source and many existing sources are drying up. About one third of wells drilled for rural water supply prove dry, and communities managing schemes have to seek new sources frequently. What is needed is better initial prospection by the community, the agency and NWRA, and provision for sustainable community management to ensure source protection from depletion and pollution. Therefore the action plan (2.2.1, 2.2.2) provides for:

- cooperation with NWRA, EPA and the local authorities within basin plans and under the guidance of basin committees to map, identify and monitor resources
- establishment of water user committees and societies with responsibility for sustainable management
- protection measures and a protection zone around each well
- calling on traditional water source protection rules and practices e.g. the "500 m between wells" rule
- protection and monitoring of water quality

Outcome 2.3 Targeting interventions and sustainable community institutions

|   |  |  | Costs (\$ '000s) |         | 00s)    |
|---|--|--|------------------|---------|---------|
| Outcome   | Key outputs  | Leading indicators                         | 2008-10          | 2011-15 | 2008-15 |
| 2.3 Targeting interventions and sustainable community | Demand responsive<br>approach applied<br>systematically (2.3.1)              | Increased coverage in poverty target areas | 1,326            | 765     | 2,091   |
| institutions  | All projects managed<br>by water user<br>committees and<br>societies (2.3.2) | Target 100%                                |                  |         |         |
|   | Inventory of schemes (2.3.3)   | Inventory complete by 2009.                |                  |         |         |

The action plan provides for the *demand responsive approach* (*DRA*) to be adopted as standard by all agencies, taking poor groups into consideration (2.3.1), and for all projects to be implemented with and managed by *community-based water user committees and societies* (2.3.2).

A DRA manual will be prepared, and systematic capacity building will be provided to water user associations and committees. Agencies which lack skills in social mobilization and community capacity building, particularly GARWSP, will strengthen their capability through recruitment, training and inter-agency collaboration.

In order to target financing to the areas of greatest need, the action plan provides (2.3.3) for a complete *inventory of all rural water supply schemes* in 2008/9, and for the development of an *interventions map* which will provide the basis for planning, allocation of areas of intervention to the agencies, and poverty targeting. A budget of \$800,000 has been assigned for this exercise.

Outcome 3.1 Increasing the efficiency of project implementation

|                                      |                               |  | Costs (\$ '000s) |         | 0s)     |
|--------------------------------------|-------------------------------|--|------------------|---------|---------|
| Outcome                              | Key outputs                   | Leading indicators                               | 2008-10          | 2011-15 | 2008-15 |
| 3.1 Increased project implementation | Agency capacity built (3.1.1) | Average project cycle shortened                  | 1,684            | 1,530   | 3,214   |
| efficiency                           | Common approach (3.1.2)       | Adoption of common implementation manual in 2008 |                  |         |         |
|                                      | Community contracting (3.1.3) | # of projects adopting community contracting     |                  |         |         |

To achieve this outcome, a programme to build the *implementation capacity* of the agencies will be undertaken (3.1.1). A sector-wide M&E system, to be managed by GARWSP, will be finalized and this will allow development and maintenance of a data base for the entire rural water sub-sector. A training needs assessment will be carried out

during 2008, and from 2009 a coordinated training programme for subsector staff will be implemented (cost \$1.0 million 2009-2010).

Consultations will be held between all sector agencies to align upon a *common approach* (3.1.2), and a common implementation manual will be prepared in 2008. The interventions map (see 2.3.3) will be used as the basis for coordinated planning. *Community contracting* will be introduced wherever possible. Relying on SFD experience, the necessary procedures, handbook and formats will be prepared, and agency staff will be trained (3.1.3).

Outcome 3.2 Strengthening coordination

|                                     |  |                                      | (       | 10s)    |         |
|-------------------------------------|--|--------------------------------------|---------|---------|---------|
| Outcome                             | Key outputs  | Leading indicators                   | 2008-10 | 2011-15 | 2008-15 |
| 3.2<br>Strengthened<br>coordination | Coordinated annual planning (3.2.1)                                      | Unified agreed annual plan from 2009 | 174     | 76      | 250     |
| Coordination                        | NGO participation (3.2.2)  | Number of projects involving NGOs    |         |         |         |
|                                     | Intervention areas specified according to the interventions maps (3.2.3) |                                      |         |         |         |
|                                     | Common evaluation (3.2.4)  | Regular evaluation reports           |         |         |         |

To achieve stronger coordination, the action plan provides for *joint annual planning* and the adoption of a unified agreed annual programme of interventions, beginning in 2008 for the 2009 programme (3.2.1). This will be supported by the interventions map (2.3.3 and 3.1.2) and by information sharing through a GARWSP-administered website. This heightened level of coordination will be reflected at governorate level, where a system of meetings between all the agencies at least every two months will be introduced from 2008.

The action plan (3.2.2) provides for *encouragement of NGOs to participate* particularly in the poorest communities, and for partnerships under which NGOs will provide community mobilization and training services as an accompaniment to GARWSP hardware investments. The action plan also provides for development of a mechanism to support start up and capacity building for community or privately run schemes, especially in remote or mountainous areas (with cooperation of NGOs and SFD). Limited financing for this is available with SFD, and other donors and/or WSSP may co-finance. As mentioned above, it is also possible that existing CBOs and qualified NGOs could benefit from output-based aid under the proposed Sector Wide Approach (SWAp).

The action plan also provides for *intervention areas for the agencies working in rural* water to be mapped onto the interventions maps (3.2.3). The action plan also provides (3.2.4) for all agencies to align under the GARWSP umbrella for *sub-sector* coordination, and to agree on principles and criteria for monitoring and evaluation.

Outcome 3.3 GARWSP decentralization

|                  |                 |                          | Costs (\$ '000s) |         |         |
|------------------|-----------------|--------------------------|------------------|---------|---------|
| Outcome          | Key outputs     | Leading indicators       | 2008-10          | 2011-15 | 2008-15 |
| 3.3 GARWSP       | GARWSP branches | Decentralization compete | 6,135            | 330     | 6,465   |
| decentralization | fully empowered | by 2010                  |                  |         |         |
|                  | (3.3.1)         |                          |                  |         |         |

In order to ensure responsiveness to community needs and coordination with local authorities, GARWSP has been pursuing *decentralization*. It has classified all of its 20 branches according to their capacity, and is systematically decentralizing human and financial resource allocation and procurement responsibility, matched with a programme to equip the branches and to develop their human resources. JAR III reported that 11 branches are already empowered to carry out the full range of activities, except for disbursement from the investment budget, which is likely also to be decentralized by 2009. Four further branches were similarly empowered in the second quarter of 2008. A Management Information System has been developed, and branches are linked to headquarters through an information network. The action plan (3.3.1) provides for the decentralization process to be completed by 2010. Investments include capacity building, buildings, vehicles, furniture, equipment, and office machinery. In addition, the action plan provides for associating local authorities in development of district level planning, and for training of water user committees and societies.

## **RWSS Sub Sector: Log Frame**

# Goal: Providing safe, sustainable, affordable and equitable water along with appropriate sanitation

| Hierarchy of Results   | Performance Indicators  |  |  |
|--|---|--|--|
| Overall impact   |   |  |  |
| Coverage of safe, sustainable, affordable and equitable water along with   | ► Water supply service coverage increases from 45% in 2007 to 60% by 2010 and to >72% by 2015   |  |  |
| appropriate sanitation increased   | ► All water supply projects have provision for appropriate sanitation and health and hygiene education                                      |  |  |
| Outcome 1.1  |   |  |  |
| Increased rate of coverage of water and appropriate sanitation services  | ► Rate/percentage of annual increase of coverage with water and sanitation services (5% annually)   |  |  |
|  | ► 6.4 million extra rural people get access to safe water supply 2008-2015  |  |  |
| Outputs  |   |  |  |
| 1.1.1 NWSSIP Update approved and becomes obligatory to all agencies operating in the sub sector and a tool for coordinating implementation | ►NWSSIP Update approved in early 2009   |  |  |
| 1.1.2 Investment program developed and financed  | ► Investment for hardware components averages (\$100 million) annually  |  |  |
|  | ► Investment for policy implementation and institutional development averages \$4.0 million annually 2008-2010 and \$1.0 million 2011-2015. |  |  |
| Outcome 2.1  |   |  |  |
| Appropriate technological alternatives adopted   | ►Decrease of per-head cost  |  |  |
| udopiod  | ► Percentage of implemented projects with alternative technological alternatives that achieve the objectives                                |  |  |
| Outputs  |   |  |  |
| 2.1.1 Technology choice improved and made appropriate  | Comprehensive set of manuals produced by (end 2009)  Number of projects with low cost technology  |  |  |

| Hierarchy of Results   | Performance Indicators   |
|--|--|
| 2.1.2 Appropriate sanitation and hygiene Included in all interventions   | ▶10% of cost of all projects is for sanitation and hygiene investments   |
| Outcome 2.2  |  |
| Water resources are ensured and protected, and water quality is assured  | ►All rural water supply wells are licenced by NWRA and protected   |
| Outputs  |  |
| 2.2.1 Water resources ensured and protected, and water quality ensured   | <ul> <li>Number of water quality laboratories established</li> <li>Number of water quality laboratories adequately functioning</li> <li>Number of sources tested</li> </ul>  |
| 2.2.2 Community partnership in water resources management, conservation and protection promoted, and level of awareness raised | <ul> <li>Number of water user committees and societies operational</li> <li>Number of education campaigns containing water resource management and protection messages</li> </ul>  |
| Outcome 2.3  |  |
| Targeting improved and sustainability ensured  | ► Field survey of water and sanitation projects coverage conducted and completed by the end of 2008 and results shared by mid 2009 ► Interventions map published in 2009   |
| Outputs  |  |
| 2.3.1 Demand Responsive Approach (DRA) adopted throughout  | Number of projects implemented according to the DRA (target 100%)  |
| 2.3.2 Sustainability maintained through closer work with community institutions  | <ul> <li>▶ Percentage of working and non-working projects</li> <li>▶ Rural schemes implemented involving and organizing water user committees and societies (target 100%)</li> <li>▶ Local agencies actively participating as implementing partners</li> <li>▶ Continuity of water supply service in hours (daily, weekly, monthly)</li> <li>▶ Decrease of projects operation &amp; maintenance costs</li> </ul> |
| 2.3.3 Finance targeted to greatest need  | ► Rate of coverage in remote areas with scarce water resources and in poorest districts  |

| Hierarchy of Results   | Performance Indicators  |
|--|---|
| Outcome 3.1  |   |
| Increased project implementation efficiency  | <ul> <li>▶ Project implementation period and number of projects implemented accordingly</li> <li>▶ Rate of coincidence/agreement of results with</li> </ul> |
|  | implementation plans and programs   |
| Outputs  |   |
| 3.1.1 Capacities of partners operating in the subsector and target groups built and promoted | Number of trainees in administrative, technical and social aspects  |
|  | ► Establishment of a joint database and a mechanism for information exchange in 2009  |
| 3.1.2 Common approach developed and followed by all entities operating in the sub-sector     | ► Issue of a manual for common approach in 2009   |
| 3.1.3 Community contracting wherever possible  | ► Number of projects implemented through community contracting  |
| Outcome 3.2  |   |
| engthened coordination among all partners pperating in the sub-sector                        | ► Number of sub-sector coordination group meetings for sub-sector partners  |
|  | ►GARWSP M&E system and website operational  |
| Outputs  |   |
| 3.2.1 Joint unified vision on strategy implementation developed                              | ►Unified agreed annual plan   |
| 3.2.2 Strong and diversified base of partners  | ► Number of projects implemented by NGOs  |
| 3.2.3 Tasks and responsibilities, including  | ► Number of NGOs active in the sub sector   |
| intervention areas and types, specified  | Availability of intervention map showing type of intervention and intervention agencies (based on hydrogeological information) with periodic updating       |
| 3.2.4 Single organization for coordination, monitoring & evaluation (M&E) and supervision    | ► Regular periodic reports to supervisory entity  |
| Outcome 3.3  |   |
| 3.3 Decentralized financing and implementation   | ►GARWSP decentralization complete by 2010   |
| Outputs  |   |
| 3.3.1 Decentralization based on developed and effective local capacities                     | ▶ Delegation of authorities and responsibilities to GARWSP branches (according to branch class)   |
|  | ► Percentage by value of procurement by GARWSP branches   |
|  | ► Number of councils preparing plans and implementing projects  |

### **NWSSIP Update**

## **RWSS Sector: Action Plan and Budget**

| Activities   | P   | Monitorable steps  | Due date    | Key actor                          | Budget    | Financing   |  |  |  |  |
